Low Dose CT Scans

'Low-Dose' technology hard at work for you...

At Uniradiology, we have invested in the very best of 'Low Dose' scanning equipment in an effort to provide the local community with an affordable, reliable diagnostic imaging experience, whilst offering peace of mind about radiation exposure being kept to an absolute minimum. Adopting the A.L.A.R.A. principle (as low as reasonably achievable), Uniradiology is committed to providing the very best in patient care using modern day methods of radiation reduction in all aspects of the clinical environment.

Where quality and value unite.

Delivery of patient media

Ordinarily patients can expect to have their results back to their referring physician within 24 hours. Results are delivered either electronically, by courier or the patient can take their images at the time of their examination. **Medically Urgent cases** will always be prioritised and should be back at the patient's referring physician or any subsequent relevant medical personnel within 2 hours post completion of the patients examination.

Uniradiology happily deliver films or CD's to practices who accept delivery of patient media; in most cases the patient will be given the images at the time of the scan. Reports will then be forwarded to the referring practice.
